EDUCATION

SRM Institute of Science and Technology

Bachelor of Technology in Computer Science

Chennai, TN

Aug. 2020 – May 2024

EXPERIENCE

Associate Software Engineer

Finzly

Apr 2026 – Present

Chennai, Tamil Nadu, India

- Leading development of payment processing features and cloud infrastructure for multi-tenant banking clients serving 50+ financial institutions
- Collaborate directly with product managers and banking clients to gather requirements, clarify business workflows, and translate them into scalable technical solutions

Software Engineering Trainee

Aug 2024 – Mar 2026

- Improved Payment Blotter performance by reducing API response time from 2–3 seconds to 300–600 ms through query optimization
- Developed a scheduled Holiday Job to ingest third-party holiday data, store files in environment-specific S3 buckets, and update multi-tenant databases
- Built an HTML editor for client notification templates with automatic synchronization to S3 and GitHub
- Implemented audit logging using SQL triggers and AWS Lambda, replacing Javers to reduce container overhead and enable frontend audit visibility
- Integrated Twilio Lookup API in Java to validate global phone numbers and enhanced Angular UI components for in-app navigation

Intern

Samsung PRISM

Jan 2023 – Aug 2023

Virtual

- Worked on Synthetic-to-Real Domain Adaptation (Unsupervised) for image segmentation
- Investigated existing segmentation solutions and datasets including SYNTHIA, Cityscapes, ADE20K, and COCO
- Explored visualization techniques to enhance interpretability of domain adaptation results

PROJECTS

Lunchbox Food Audit System | *Java, Spring Boot, Angular, MySQL, TOTP*

lunchboxes.in

- Built and deployed a full-stack lunch audit platform where employees vote daily for meals, view real-time participation, and HR/admins track food requirements via a dashboard
- Implemented QR-code-based meal confirmation to prevent proxy voting and TOTP-based passwordless authentication with email used only for first-time onboarding
- Designed a zero-cost on-premise deployment with automated batch scripts for backend service lifecycle management

VartalApp | *ChatGPT's Whisper API, Node.js, Twilio*

- Developed a WhatsApp bot using Twilio and ChatGPT's Whisper API to convert audio messages to text with GPT-powered spell correction
- Built end-to-end pipeline: audio ingestion, speech-to-text transcription, NLP correction, and formatted response delivery via WhatsApp

Food Ordering WhatsApp Bot | *Twilio WhatsApp API, Node.js, Razorpay*

- Built a conversational ordering bot where customers browse menus, pay via Razorpay, and receive invoices directly on WhatsApp
- Created an admin web dashboard to manage orders, track delivery addresses, and mark dispatches in real-time

TECHNICAL SKILLS

Languages: Java, TypeScript, SQL, HTML/CSS

Frameworks: Spring Boot, Hibernate, Spring Data JPA, Angular, Node.js, gRPC, Microservices, REST APIs

Cloud & Tools: AWS, Elasticsearch, Git, Apache JMeter, Twilio, Postman, DataDog, Skooner
